Sample Response (Access the URL below)

`https://api.football-data-api.com/league-matches?key=example&season_id=2012`

This endpoint responds with the full match schedule of the selected league id. Response will be a JSON Array containing each match details. Defaults to 300 matches per page. You can set &max_per_page=X (ie &max_per_page=500) to raise the amount of matches returned per page.

Query Parameters

Name	Type	Description
------	------	-------------

page	integer	ie "&page=2". Pagination. Each page by default shows up to 500 matches. If you want to see the next 500 matches, add &page=2 or &page=3, etc to paginate.
max_per_page	integer	ie "&max_per_page=500". This raises the number of matches returned per page. Max 1000.
max_time	integer	UNIX timestamp. Set this number if you would like the API to return the stats of the league and the teams up to a certain time. For example, if I enter &max_time=1537984169, then the API will respond with stats as of Sept 26, 2018.
key*	string	Your API Key
season_id*	integer	ID of the league season that you would like to retrieve.

200 Successfully retrieved all leagues.
